MSP Glintt Achieves Real-Time Cloud and Data Center Infrastructure Visibility on a Single Screen Using AccelOps

Global technology company selects AccelOps platform to ensure security and efficiency of business services running on the cloud

SANTA CLARA, Calif., and LISBON, Portugal – Nov. 12, 2013 - Glintt – Global Intelligence Technologies – has selected the AccelOps analytics-driven IT operations management platform for its new Managed Service Provider (MSP) business operations. AccelOps' integrated security and monitoring platform is the first to deliver a holistic view of the entire cloud and data center infrastructure on a single screen. With AccelOps, Glintt can gain greater understanding of the impact security incidents have on business services running on the cloud.

Glintt is one of the largest Portuguese technology companies and operates in Europe, Africa and Latin America in the banking, telecommunications, health, trade, industry and public administration sectors.

Glintt considered other leading IT operations management solutions, including those from Splunk, RSA enVision, HP ArcSight and Q1 Labs, but AccelOps offered the most attractive value proposition for the company, said Luís Martins, business unit manager of governance, risk and compliance at Glintt.

"AccelOps' ability to address businesses services is vital to Glintt," Martins said. "We can now collect integrated security, performance and availability information in real time from cloud infrastructure and from databases, which is something that other providers did not offer."

Based on its patented distributed real-time analytics technology, AccelOps automatically analyzes behavior patterns spanning server, storage, network, security, users and applications to rapidly detect and resolve problems. The AccelOps virtual appliance software manages security, network performance and compliance, all on a single screen. This increased visibility provides additional information and detail to Glintt, avoiding log time and helping to understand the impact and risk service disruptions could have on infrastructure.

"AccelOps' SIEM capabilities glues everything together," Martins said. "It gives us visibility into incidents, as well as security, performance and availability. It's critical that we have the most up-

to-date information, and with AccelOps, we can better serve our customers because we have a deeper, more complete view of our entire infrastructure."

Unlike traditional single-purpose tools designed for standalone enterprises, AccelOps provides Glintt with native multi-tenancy and has been designed for scalable deployment as a virtual appliance that can be deployed completely within the cloud. AccelOps' native multi-tenancy provides security and flexibility for MSPs, MSSPs and cloud service providers.

"Glintt's customers look to it to deliver efficient and reliable business services in the cloud," said Flint Brenton, president and CEO of AccelOps. "Now the company has a world-class monitoring solution that provides greater visibility of security incidents and network operations that affect these business services."

AccelOps is the leader in analytics-driven IT operations management for cloud and virtualized infrastructures and is the industry's only integrated software platform to monitor security, performance and availability across all aspects of the IT infrastructure on a single screen. The software works across traditional data centers, as well as public, private and hybrid clouds.

About AccelOps

AccelOps provides analytics-driven IT Operations Management for cloud and virtualized infrastructures. The virtual appliance software manages security, network performance and compliance, all on a single screen. AccelOps automatically discovers, analyzes and automates IT issues in machine and big data across organizations' data centers and cloud resources, spanning servers, storage, networks, security, applications and users. AccelOps' patented analytics engine with cross-correlation sends real-time alerts when deviations occur that indicate a security or performance-impacting event. The AccelOps platform scales seamlessly and provides unmatched delivery of proactive security and operational intelligence, allowing organizations to be more responsive and competitive as they expand their IT capabilities.
